# Cambria County Department of Emergency Services

August 14, 2024

Cambria County Municipality partners,

Cambria County Emergency Management is in the process of collecting damage assessments throughout the county after Tropical Storm Debby last week. We encourage the municipalities to work with their appointed Local Emergency Management Coordinators in collecting any and all weather-related damage in your area to be reported. Cambria County is applying to be added to a Disaster Declaration along with several other counties. Our office is working with state officials at PEMA to provide damage and hazard mitigation assessments to assist with recovery efforts.

It is important to report any weather-related damage. During your assessments highlight damage to:

- Residential and commercial property
- Critical infrastructure including roadways, bridges, utilities for both local and state owned
- Waterways including stream and roadway water run off projects
- Flood control systems
- Emergency vehicle access impairment
- Public health and safety
- Recreation and parks
- Crop and/or livestock loss or damage

Attached is a copy of a PEMA DAP-19 "Local Damage Assessment Form". We understand that some information may not be available so please include as much information as you can. Along with this information please document with photos and/or video. Questions can be directed to our office.

We appreciate the assistance in these trying times after a disaster. Working together we can overcome for a better tomorrow.

Respectfully:

A handwritten signature in black ink that reads "Thomas Davis".

Thomas Davis  
Interim Director
